

NANO TECHNOLOGY SYSTEM FOR BETTER COFFEE & TEA TASTE

The majority of the water filtration systems available today in the market, are one for all, where you can buy a filtration unit and use it for all applications, but it doesn't work that way, today the demand in better water quality is higher than ever, and each application requires a different process.

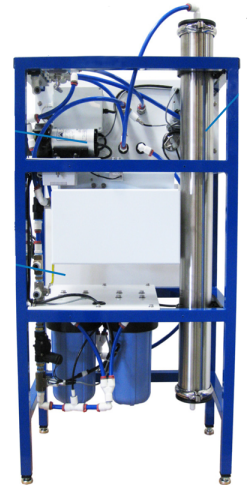

The AETHER NANOFILTRATION SYSTEM is designed with only one thing in mind; Coffee and Tea quality and taste.

Our state of the art Nano filtration system is crafted and engineered to retain the right type and amount of minerals in the water, while removing harmful and unnecessary ones.

Features

- Nanofiltration water treatment system for tea and coffee preparation
- Powder coated aluminum frame
- System controller with time delay blend control
- TDS Meters
- Flow Meters
- Variable speed pump
- Integrated product water bag and delivery assembly
- (2) 10" GAC prefilters with BB housings
- (1) 4040 Nanofiltration membranes with stainless steel housings

Bypass Valve
